Webinar 1 | Unveiling the World Drought Atlas: Risks, Pathways, and Regional Perspectives

|

Description / Abstract

Description

Join us for a two-part webinar series on the World Drought Atlas, where experts will present key findings and insights into the evolving challenges of drought worldwide. This webinar series is co-organized by CIMA, IVM-Vrije Universiteit Amsterdam, UNU, GWP, and UNCCD.

Webinar 1: Understanding Drought Impacts & Adaptation

This session will explore how drought affects critical sectors, including water supply, agriculture, hydropower, inland navigation, and ecosystems. Experts will discuss cascading risks across systems and present conceptual frameworks for adaptation, emphasizing the need for a forward-looking approach to drought management.
